Gemma 3n Post-Training for Real-Time Streaming (Frontier AI & GenAI)
Created a synthetic audio–text framework for real-time ASR/AST (speech/voice tasks); eliminated human labeling dependence while keeping WER/BLEU within **1%** of baselines.
Built the **full-stack RL+SFT infrastructure** for Gemma 3n backfill and self-improvement.
Engineered a high-throughput training pipeline for Gemma 3n, accelerating RL (GRPO, DAPO) by 5× and enabling PyTorch/SGLang support.
Contributed to the **Gemma 3n technical report**.

Honda Research Institute USA San Jose, CA, USA
Research Intern Jun. 2024–Sep. 2024
Multimodal LLM Post-Training (8B–70B) for Social Reasoning
Published a *spotlight* paper at ICML 2025 (Top 2.59%). Filed a US patent.
Developed long-context multimodal LLMs and accelerated inference-time scaling using vLLM framework. Enabled long-context modeling of human behavior and autonomous driving in multimodal environments; scalable to LLMs up to 70B/405B parameters.
